PATENT CLAIMS

Modlding composition for the production of sanitary-ware components, comprising a methyl-methacrylatebased syrup and from 50 to 85%, expressed in terms of the moulding composition, of an inorganic filler, characterised in that the moulding composition furthermore comprises elastomer particles or elastomer particle aggregates having a particle size smaller than 100 µm in an amount in the range of 5 % by weight to < 20 % by weight, expressed in terms of the mass of the syrup.

- Moulding composition according to Claim 1, char-10 acterised in that the syrup comprises PMMA with a molecular weight (M_W) of from 50,000 to 250,000 in an amount of up to 20 % by weight, expressed in terms of the mass of the syrup.
 - Moulding composition according to Claim 1 er-2, characterised in that it contains a proportion of from 10 to 18 % by weight of the elastomer particles or elastomer particle aggregates, expressed in terms of the mass of the syrup.
 - Moulding composition according to one 1 to 3, characterised in that the elastomer of the particles or aggregates consists of partially crosslinked polymer.
- Moulding composition according to one-5. preceding claims, characterised in that the elastomer 25 particles have a core/shell structure, the core being formed by an elastomer and the shell from a matrixcompatible polymer which is essentially insoluble in the syrup.
- Moulding composition according to Claim 5, char-30 acterised in that the shell is chemically bonded to the core elastomer.

OPSS+E+I OSIGO

Moulding composition according to Claim 5 or 6, 7. characterised in that the shell comprises a thermoplastic polymer.

Moulding composition according to Claim 5 of 6, characterised in that the shell comprises a partially crosslinked polymer.

Moulding composition according to one 5 to 8, characterised in that the shell is swellable in the syrup of the moulding composition.

Moulding composition according to one 5 to 9, characterised in that the shell comprises an

acrylate polymer

20

Moulding composition according to one 11. preceding claims, characterised in that the core consists of a partial (1) crosslinked polysiloxane, which is grafted with an acrylate monomer to form the shel

Moulding composition according to 5 to 11, characterised in that the proportion by weight the core in the core/shell elastomer particles amounts to a proportion of from 40 to 60 % by weight.

Moulding composition according to sine preceding claims, characterised in that the filler content is from 60 to 80 % by weight, expressed in terms of the moulding composition.

14. Sanitary-ware component, produced using a moulding composition according to one

Sanitary-ware component in the form of a kitchen 15. sink according to laim 14, the bottom thickness of the kitchen sink being less than 7 mm.

16. Kitchen/sink according to Claim 15, character-30 ised in that the bottom thickness is \leq 5 mm.
